010692-2023-CMISC	Commercial Misc. - Plumbing	220 Lakeway Dr Allen, TX 75013 123022	Permit Issued	11/21/2023	5/19/2024	
Applicant: Benjamin Stolfi			0	\$100,425.00	\$995.88	
<i>Description: Restore waterfall and replace upper tier basin fountain with 3 floating fountains and aeration system. The project will attempt to mimic the original design's results with some changes to the pipes due to physical spacing under the fountain pools and behind the waterfall trough. Assumes that the electrical for the pump and panel are in good working condition due to them being dormant for an extended time but in operational condition when it pumping stopped. Begin with connections on the outside of the vault and use only need PVC schedule 40 pipe from vault to the (9) 6-inch pipes that will enter the waterfall troughs. The fountain pool will have 3 floating fountains and 1 large disc aeration system for water circulation. The pump and pvc pipe will be bypassed. 1 pipe or either 1.5 or 2 inches in size will come off the waterfall trough lines and fill the fountain pool with new water. An overflow pipe then will be added to flow water via gravity to the waterfall trough. This will not adjust the incoming amount of water into the trough as it is all recycled. Aeration with (1) four disc aeration unit. New electrical will be added and brought from lower area near vault to have multiple outlets for fountains and aeration units. New outlets, cable and breakers will be added. Fountains will have digital control panels for timers and remote controls for the colored LED lighting. The fountains will be 1/2 HP and mimic old stationary fountains. Boring through the concrete in two areas for incoming water and outflowing water. Capping of existing pipes so that water can't enter the old system. These will be semi-permanent caps, no concrete will be poured down the pipes. Caps will be water tight but will be able to be removed if needed. Caps may not be able to be reused. Pressure wash the interior of the Fountain Pool. Pipes will mimic original design for the most part. Originally, 14-inch pipes were reduced to (3) 10-inch pipes then reduced again to (9) 6inch pipes that fed the trough. Due to restrictions of space and safety under and behind the trough vendor will use multiple 10inch pipe and 8inch pipes to deliver water from vault to the trough or revise proposal accordingly. Enter the trough with (9) 6-inch pipes and (1) 3-inch overflow pipe from the fountain pool. Final configuration of pipes will not be known until we break ground. From the Vault to the waterfall wall, excavate the area and lay pipe and work to reduce the flow through multiple pipes. Build a wall (chase) that will enclose the pipes as they go vertically up the wall. Match the current stone with new stone so the walls match. Plumb the upper section behind and under the trough so the (9) 6-inch pipes will enter the trough. The old pipe in the trough have been concreted and these will have to be bored out. Some flow control will be added to certain pipes to be able to adjust the flow of water into the trough. Diffusers will be added above the incoming 6-inch pipes as was done before to reduce wave actions in the trough. Front of waterfall will be pressure washed.</i>
